Alistair Bailey

I currently work as a learning technologist supporting Librarians at the University of Southampton.[1]

An engineer by training, I have worked primarily as an informatician and research scientist investigating antigen processing and presentation by major histocompatibility molecules.

My most recent project was CRUK Accelerator: Improving immunotherapy treatment for cancer patients.[2] Other projects I have worked on include research into influenza, COVID19, skin sensitization to chemical allergens, asthma and contagious cancer in the Tasmanian Devil. I am also a Data and Software Carpentry[3] instructor.

RESEARCH EXPERIENCE

Current | 2018

RESEARCH FELLOW

Centre for Proteomic Research/Cancer Sciences, University of Southampton — Southampton, UK

- Cancer Research UK Accelerator: this project aims to identify potential treatment targets for hard to treat cancers such as lung cancer using peptidomics methods.

  In my role, I process, analyse and manage data from various Omics technologies, primarily whole exome sequencing, RNAseq and proteomics. Proteomics data I receive as Thermo raw data and process with Peaks Studio[5], and post-process in R and RStudio. Whole exome and transcriptomics data I receive as fastq files and I use a mixture of command line tools using bash scripts and R and RStudio. I tend to follow the Broad Institute Best Practices for genomic data analysis[6] and Cornell Bioinformatics Core[7] for transcriptomic data processing. Scripts and processed data are managed using git version control. Raw data is backed up remotely and deposited along with processed outputs public repositories such as EBI PRIDE[8] and the European Phenome-Genome Archive[9] following FAIR protocols[10]. My primary computer is a Linux Ubuntu machine, but I also use Windows.

- We have also developed our method to identify treatment targets for infectious diseases such as influenza.
- In 2020 I also worked to develop a COVID19 test using proteomics methods.

2018 | 2015
