

ALISTAIR BAILEY

An engineer by training, I have since worked primarily as an informatician and research scientist. I currently work as a learning technologist supporting Librarians at the University of Southampton.¹

The topic of my research career has been the role of HLA antigen processing and presentation in disease recognition by T cells. In cancer² this has focused on HLA-presented tumour antigens³, and in infectious disease the focus has been HLA-presented viral⁴ and bacterial antigens. Exploiting these targets has the potential for enhancing personalised therapies, vaccine development and understanding allergy.

I have contributed to research into COVID19⁵, skin sensitization to chemical allergens⁶, asthma⁷ and contagious cancer in the Tasmanian Devil⁸.

My core skills are processing and analysing data from whole exome sequencing, RNAseq, scRNAseq and proteomics assays. My workflow combines command line tools with micromamba, the R programming language and git version control.

Proteomics data I have curated, deposited and I am the data controller for is deposited at the PRoteomics IDentifications Archive⁹. Whole Exome and RNAseq data I have curated, deposited and I am the data controller for is deposited at the European Genome-phenome Archive¹⁰.

I am a Data and Software Carpentry¹¹ instructor and I have also created and delivered my own workshops to teach foundational R coding and data science skills¹² to bioscientists and web design¹³ to librarians.

- Cancer Research UK Accelerator: this project aims to identify potential treatment targets for hard to treat cancers using multi-omics methods. In this project our focus was on oesophageal, lung and neuroendocrine cancers.

As an informatician I processed, analysed and managed data from whole exome sequencing, RNAseq, scRNAseq and proteomics.

For sequencing fastq data, my workflow comprised of a mixture of command line tools using bash scripts and R/RStudio. I followed the Broad Institute Best Practices for genomic data analysis¹⁹ and Cornell Bioinformatics Core²⁰. For proteomics data, my workflow used Peaks Studio²¹, and post-process in R and RStudio.

Scripts and processed data were managed using git version control. Raw data was deposited along with processed outputs in PRoteomics IDentifications Archive²² and the European Phenome-Genome Archive²³.

We also developed our method to identify treatment targets for infectious diseases from influenza and bacterial proteins. In 2020 I also worked to develop a COVID19 test using proteomics methods.
